1. Which are the top three variables in your model which contribute most towards the probability of a lead getting converted?

   These are Three variables
       1. `Welingak Websites`
       2. `Reference`
       3. `Time Spend on website`

2. What are the top 3 categorical/dummy variables in the model which should be focused the most on in order to increase the probability of lead conversion?

   Here are three
       1. `Olark Chat`
       2. `Olark`
       3. `SMS`

3. X Education has a period of 2 months every year during which they hire some interns. The sales team, in particular, has around 10 interns allotted to them. So during this phase, they wish to make the lead conversion more aggressive. So they want almost all of the potential leads (i.e. the customers who have been predicted as 1 by the model) to be converted and hence, want to make phone calls to as much of such people as possible. Suggest a good strategy they should employ at this stage.

   Here are some suggestions
       1. Target on those who visit frequently and spend most time
       2. Target that have come through References
       3. Focus on Olark Chat lead

4. Similarly, at times, the company reaches its target for a quarter before the deadline. During this time, the company wants the sales team to focus on some new work as well. So during this time, the company's aim is to not make phone calls unless it's extremely necessary, i.e. they want to minimize the rate of useless phone calls. Suggest a strategy they should employ at this stage.

   Here are some suggestions
1. Do not focus on unemployed
2. Do not focus on students. And focus on professional
